Adolescent Vaccine Schedule

Vaccinating your adolescent according to the recommended vaccine schedule protects them *before* they come across life-threatening diseases.

Vaccine Schedule

Age 9-10

- HPV Vaccine 1
- HPV Vaccine 2
  (6-12 months after vaccine 1)

Age 11-12

- HPV Vaccine 1 and 2
  (if not given at ages 9-10)
- MenACWY Vaccine 1
- Tdap (1 Vaccine)

Age 16

- MenACWY Vaccine 2
- MenB vaccines 1 & 2
  (check with health provider)

Age 18

- Mpox vaccine
  (check with health provider)

Every Year

- Flu Vaccine
- COVID-19 Vaccine

Safe & Effective

Serious reactions to vaccines are rare. People are more likely to get hit by lightning than have a severe allergic reaction to *any* vaccine.

Catch Up

If your child is behind on their vaccinations, they can still catch up. However, delaying vaccines puts them at risk for serious illnesses.

Don't Have Regrets

The pros of vaccination outweigh the cons. Missing vaccines puts your child – and others – at risk for serious illnesses.
