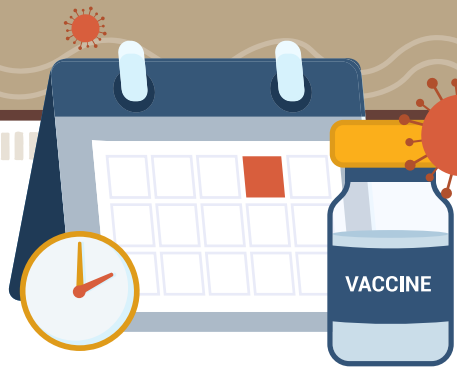
Protecting Your Kids from Respiratory Illnesses

Respiratory Illnesses

Respiratory illnesses – like whooping cough, pneumonia, flu, RSV, and COVID – can be extremely dangerous for kids.

Who Should Get Vaccinated

Whooping Cough (DTaP Vaccine)	Babies 2 mo., 4 mo., and 6 mo. **AND** Kids 15-18 mo. and 4-6 years old
Pneumonia	Babies 2 mo., 4 mo., and 6 mo. **AND** Kids 12-15 mo.
RSV	Babies less than 8 mo. old **AND** Kids 8-19 mo. old
COVID & Flu	Everyone 6 mo. and older *every year*



Why Every Year?

COVID and flu frequently change how they look. We need updated vaccines, so our bodies know how to fight these diseases.

Vaccines are Safe

Serious reactions are rare. People are more likely to get hit by lightning than have a severe allergic reaction to *any* vaccine.

Don't Have Regrets

The pros of vaccination outweigh the cons. Missing vaccines puts your child – and others – at risk for serious illnesses.
